CBD State Regulations Table

The following table is an excerpt from our 43-page [CBD Compliance Resource Guide](#). It is meant to outline state-specific details and regulations pertaining to the manufacturing, processing, and sale of federally compliant **topical** CBD products. While some states currently allow certain types of CBD products that are not permissible at the national level, such as ingestible products, the details of this guide focus on state CBD regulations that are consistent with current federal guidances and in line with the products and websites that are in scope for our CBD website and CBD product certification program.

**Note: State-level regulations differ from the specific states identified as eligible for Google advertising. For more information please refer to our [LegitScript CBD Certification](#) section.*
